FITTING GUIDE

SILICONE PHONE HOLDER

Stretch silicone holder that clips onto the quarter-turn base of a Garmin or Blackbird computer, or straps to the bar, no tools needed. Phones from 4 to 7.5 inches.

GARMIN, BLACKBIRD BASES · PHONES 4 TO 7.5 INCHES · SILICONE, 67 × 128 MM

Before fitting

- A computer base already on the bike (out-front or bar mount, quarter-turn), or a clear stretch of bar next to the stem.
- The phone in its usual case: the holder's corners stretch over the corners of the case.
- No tools.

Fitting, step by step

1. **Clip the holder** onto the computer base: set the back of the holder on the plate, then turn a quarter turn until it locks. Without a base, attach it directly to the bar, next to the stem.
2. **Choose the orientation,** landscape or portrait depending on your navigation app, screen facing you.
3. **Stretch the four corners** one by one over the corners of the phone, starting at the bottom. The silicone should press the phone flat against the holder with no play.
4. **Check** that all four corners are engaged, then give the bar a light shake: nothing should move. Repeat this check before every ride.
5. **To take the phone out,** free two corners on the same side and slide the phone out: the holder stays on the bike.

Care

- Silicone rinses with clean water; no solvent or degreaser.
- Check the corners regularly: silicone that is split or no longer springs back will not hold, replace the holder.

Specifications

Compatible bases	**Garmin, Blackbird**	Phones	**4 to 7.5 inches**
Material	**Stretch silicone**	Size	**67 × 128 mm**
Attachment	**Tool-free**	Colour	**Black**

IF SOMETHING GOES WRONG

- **The holder turns on the base**: it is not locked; take it off and redo the quarter turn until it locks.
- **A corner comes off while riding**: phone outside 4 to 7.5 inches, case included, or case corners too rounded; check the size.
- **The screen stops responding in the rain**: a wet touchscreen gets erratic; wipe it, a waterproof case helps.

DON'T

- No heavy phone on the bar for rough gravel or mountain biking: stow it and read a computer. This holder is made for the city, commuting and the road.
- Never ride with a corner loose or the silicone damaged.
