USER GUIDE

LED ARMBAND LIGHT, USB-C, 3 MODES

A white and red COB LED strip on an adjustable strap, 42 g, USB-C rechargeable: worn on the arm, wrist, ankle or a bag to be seen from afar when cycling, running or walking. Fitting, modes, charging, care.

REF. BRACELETLEDNOIR · 3 MODES: WHITE, RED, ALTERNATING FLASH · USB-C, 400 MAH, IPX4, 42 G

01 · GETTING STARTED

CONTENTS, FITTING, FIRST USE

In the box

- The armband light: module with button and USB-C port, notched strap, white and red COB LED strip.
- A USB-C charging cable.

Fitting, step by step

1. **Charge it before the first outing** with the supplied cable, from a phone charger or computer USB port. Close the port cover after charging.
2. **Choose where to wear it.** Upper arm on the traffic side to be seen by cars, wrist to signal your turns, ankle for a moving point of light, or a bag strap.
3. **Adjust the strap** to the notch that holds without squeezing: the band must neither turn nor cut off circulation.
4. **Point the LED strip** outwards, towards the people who need to see you: backwards on the ankle, sideways on the arm.
5. **Switch on with the button on the module** and pick the mode (next page). Switch it off before putting it away.

Specifications

LED	**White and red COB**	Modes	**White, red, flash**
Battery	**400 mAh, USB-C**	Water rating	**IPX4**
Length	**386 mm**	Module	**46 mm**
Weight	**42 g**	Use	**Running, cycling, walking**

BATTERY AND WATER

- Lithium battery: never charge unattended, do not pierce the module, keep it away from strong heat.
- IPX4: rain and splashes, **not immersion**. Dry it before plugging in the cable.

ON A BIKE IT ADDS TO YOUR LIGHTS

In France a bike ridden at night carries a white or yellow front light and a red rear light fixed to the bike. The armband adds to them to show the rider's body and gestures.

02 · DAY TO DAY

MODES, CHARGING, CARE, TROUBLESHOOTING

The three modes

MODE	LIGHT	WHEN TO USE IT
1	White, high intensity	To be seen from the front: on the left arm facing cars pulling out, or walking towards traffic.
2	Red, high intensity	To be seen from behind: on the arm or ankle on the traffic side.
3	Alternating red and white flash	The most noticeable and the most economical: town, junctions, groups.

Modes follow one another with presses on the module button.

Charging

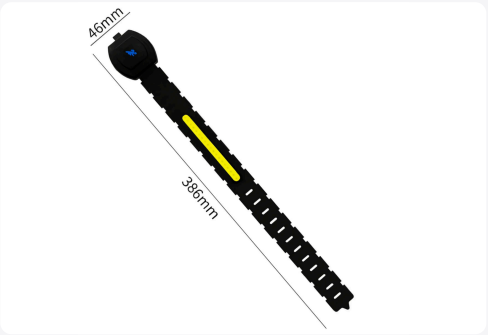

Plug the supplied USB-C cable, or any standard USB-C cable, into a phone charger or computer USB port. Recharge after every night outing rather than waiting for it to die. Always close the port cover after charging: it is what keeps the rain out.

Care

- After rain or sweat, wipe the module and strap with the port closed and let them air dry.
- Damp cloth, no solvent. Do not wear it under clothing: the light has to be visible.
- Stored for several weeks: charge it first, a lithium battery does not like sitting empty.

IF SOMETHING GOES WRONG

- **It will not switch on**: flat battery, charge for an hour and try again.
- **It will not charge**: check the plug is the right way round and fully in, try another cable or USB port, dry the port if it is damp.
- **The strap turns or slips**: one notch tighter, or over clothing rather than on sweaty skin.
- **It switches off by itself**: battery at the end of its charge. If it switches off with a full battery, contact us.

386 mm of notched strap, 46 mm module: it goes round an arm, a wrist, an ankle or a bag strap.
