QUICK GUIDE

10-PIECE PRECISION CLEANING BRUSH KIT

Ten soft nylon brushes on stainless steel stems, from the finest to the widest, to reach what a rag never touches: jockey wheels, sprockets, threads, calipers, bearing seals.

REF. BROSPRECI10 · SOFT NYLON, STAINLESS STEM · 10 SIZES

Before you start

- A **bike degreaser** or soapy water: used dry, a brush moves the dirt around without removing it.
- A rag, clean water, and the bike on a stand or upside down with the rear wheel free.
- Match the brush to the gap: fine for a thread or a jockey wheel, medium between two sprockets, wide for a chainring or a caliper.

Cleaning a drivetrain

1. **Degrease** the chain, cassette, chainrings and derailleur jockey wheels, then let it work for a few minutes.
2. **Brush between the sprockets** with a medium brush while turning the wheel; a fine brush for the jockey wheels and chainring teeth.
3. **Get into the corners:** threads, frame inserts, pedal grooves, inside the caliper, around the bearings. That is what the finest brushes are for.
4. **Rinse with clean water** at low pressure, never a pressure washer on the bearings, then wipe dry.
5. **Lube the chain** once dry, roller by roller, and wipe off the excess.

CARING FOR THE BRUSHES

Rinse them after use, squeeze them out and let them dry head down. The nylon springs back, the stainless steel does not rust: they last for years.

Specifications

Contents	**10 brushes**	Bristles	**Soft nylon**
Stem	**Stainless steel**	Sizes	**10 diameters**
Reusable	**Yes**	Uses	**Bikes, workshop, electronics**

DON'T

- No greasy brush on the rotor or the brake pads: a contaminated braking surface squeals and brakes poorly.
- No bristles pushed under a bearing seal: the grease would leave with the dirt.

BEYOND THE BIKE

Tools, motorbike and car parts, sports gear and, for the finest ones, keyboards and computer fans: a workshop kit in the broad sense, replacing the old toothbrush on the bench.
