QUICK GUIDE

AERO WHITELINE SOCKS

White mid-height cycling socks, light and compressive, seamless moulded knit and a silicone anti-slip band. For hard rides as much as for running.

MID-HEIGHT, AERO FIT · 81.1% NYLON, 10.8% POLYESTER, 3.7% ELASTANE · SIZES 35-39 AND 40-45

What they do

The one-piece moulded knit gives a sock with no bulky seams, fitted from foot to calf. Targeted compression supports the muscle and the silicone band at the top of the leg stops the sock from sliding down. Light and breathable, riding or running, all year round.

Putting them on

1. **Pick the right size:** too big, it creases inside the shoe; too small, it pulls on the heel and wears out fast.
2. **Put it on half rolled over,** set the knitted heel under yours, then unroll the leg: no crease under the sole or over the toes.
3. **Pull the leg up in one even movement** without tugging the cuff: the hold band lies flat, silicone band against the skin.
4. **Lace up as usual.** After a few kilometres, check that the heel has not slipped and the leg has not rolled down.

Care

- Machine wash at 40 °C maximum, inside out. No bleach or fabric softener: it clogs technical fibres and the silicone.
- Air dry. No tumble dryer, radiator, ironing or dry cleaning: heat slackens the elastane.

Specifications

Use	**Cycling, running**	Height	**Mid-height**
Composition	**Nylon, polyester, elastane**	Colour	**White**
Sizes	**35-39, 40-45**		

IF SOMETHING GOES WRONG

- **It slips inside the shoe**: size too big or sock pulled on askew. Go back to step 2.
- **The leg rolls down or pinches**: cuff folded or pulled too high. Lay it flat again, one notch lower.
- **It has lost its stretch**: tumble dried or washed too hot. Follow the care notes.

GOOD TO KNOW

- A compression sock is not a medical stocking: with any circulation issue, ask a doctor first. Take it off if it marks the skin or numbs the foot.
