FITTING GUIDE

# TEMPERED GLASS EDGE 850 / 550

9H tempered glass, ≈ 0.3 mm, water-repellent, touch preserved. Fit it once, in this order.

**GARMIN EDGE 850 / 550** · 9H TEMPERED GLASS · ≈ 0.3 MM, WATER-REPELLENT

## Before fitting

- A room with **no dust in the air**: the bathroom right after a shower is ideal.
- Washed hands, computer switched off, dry screen, room temperature.
- The two wipes supplied, a little adhesive tape for dust.

## Fitting, step by step

1. **Clean the screen** with the damp wipe supplied, then dry with the dry wipe. Check against the light: no smear.
2. **Check the alignment.** Without removing the film, lay the glass on the screen: it sits inside the edges of the glass and clears the buttons.
3. **Peel the film** off the adhesive side, holding the glass by its edges. Do not touch the sticky side again.
4. **Lay it from the top.** Line up the top edge, then let the glass settle: adhesion spreads on its own within seconds.
5. **Push out the bubbles** from the centre to the edges with the microfibre. Small remaining bubbles clear within 24 h.

## Specifications

| | | | |
|---|---|---|---|
| Compatibility | **Edge 850 / 550** | Glass | **Tempered, 9H, 2.5D** |
| Thickness | **≈ 0.3 mm** | Surface | **Water-repellent** |
| Touch | **Fully preserved** | Contents | **Glass, 2 wipes** |

### IF SOMETHING GOES WRONG

- **Trapped dust** (white dot with a halo): lift the nearest corner with the tape, pick the particle off with another piece of tape, lay it back down.
- **Misaligned glass**: lift it off entirely right away and start again from step 2.
- **Stubborn bubble** after 24 h: there is dust underneath, see the first point.

### DON'T

- No fitting on a cracked screen or under a case already in place: the silicone case goes on after the glass. A glass cracked by an impact has done its job: replace it.
