FITTING GUIDE

SILICONE COVERS FOR SHIMANO ROAD LEVERS

Two soft silicone sleeves that slip over the tips of Shimano road lever blades. They protect against scratches and add grip in the rain. Tool-free fitting, in a minute.

REF. HRISK · SHIMANO ROAD LEVERS · SILICONE, 23 × 17 MM

What the covers are for

- **Protecting the blade** from scratches: bike laid down, carried in a boot, tipped over at a stop.
- **Improving grip** in the rain, where the aluminium or carbon of the lever gets slippery.
- **Freshening up** levers that are already marked, without removing anything.
- The **green version** is photoluminescent: it shows in the dark after exposure to light.

Fitting, step by step

1. **Clean the blade** with soapy water or alcohol and dry it: on a greasy lever, the cover rotates.
2. **Slip the cover over the tip** of the blade, stretching it slightly with your fingers. The silicone stretches and returns to shape.
3. **Adjust it** so that it covers the end of the blade without creases, flat side against the flat side of the lever, then do the same on the other lever.
4. **Check the travel:** pull the brake fully and shift through the gears. The cover must touch neither the bar nor the hood.

Specifications

Contents	**Two covers**	Compatibility	**Shimano road levers**
Dimensions	**23 × 17 mm**	Material	**Soft silicone**
Colour	**Black**	Fitting	**Tool-free**

IF SOMETHING GOES WRONG

- **The cover rotates or slides**: lever greasy or wet when fitted. Remove, clean, dry, refit.
- **It does not go on, or gapes**: the blade is not the expected shape (another brand, MTB lever). Compare the dimensions.
- **It tears**: it was pulled by a thin edge. Stretch it by the opening, not by the tip.

DON'T

- Do not ride with a cover that restricts the lever travel. Take it off now and then to let the metal dry.

Care

Wash with soap and water. Silicone minds neither rain nor UV; the cover comes off the way it went on, so trying it costs nothing.
