FITTING GUIDE

QUARTER-TURN TAB, 4 HOLES

Nylon tab, 29 × 33 mm, that screws in place of the worn or broken quarter-turn tab of a Garmin or Bryton computer. Four screws, and the computer locks again.

GARMIN, BRYTON · NYLON, 29 × 33 MM, 4 HOLES · APPROX. 12 G, BLACK

Before fitting

- Compare the new part with the one to replace, on the back of the computer: same size, same four holes.
- A screwdriver that suits the supplied screws, a clean bench, the computer switched off.
- When to replace: the computer develops play or unclips on its own (worn tabs), or the tab is broken after a fall.

Fitting, step by step

1. **Remove the old tab** by taking its screws out one by one. Set them aside: the new screws supplied replace them.
2. **Clean the recess** on the back of the computer: no debris, no piece of broken tab left in a hole.
3. **Offer up the new tab** the same way round as the old one: on its mount, the computer must lock by turning to the right, screen upright.
4. **Screw in gradually, crosswise,** until contact, then a light tightening. The tab is nylon: no excess, the threads do not forgive.
5. **Check** on the mount: the computer locks with a quarter turn, does not turn, does not lift. Check again after the first ride.

DON'T

- No glue: the part is meant to be screwed on, and removed again if needed.
- Do not ride with a computer that has play: a tab that lets go is a computer on the road.

Specifications

Compatibility	**Garmin, Bryton**	Attachment	**4 holes, screws supplied**
Material	**Nylon**	Size	**29 × 33 mm**
Weight	**approx. 12 g**	Colour	**Black**

IF SOMETHING GOES WRONG

- **The holes do not line up**: it is not the right pattern for this computer; do not force it, contact us.
- **The computer locks with the screen askew**: tab fitted a quarter turn out; unscrew, rotate it, screw back.
- **A screw spins freely**: thread damaged by overtightening; contact us before riding.
