FITTING GUIDE

BAR END MIRROR, CONVEX LENS

A 3 cm convex mirror, adjustable through 360°, held in the bar end by an expander and folded under its cap when the bike is parked. 23 g, for bars with a 16 to 22 mm inside diameter.

REF. SUP18 · BAR INSIDE DIAMETER 16 TO 22 MM · MIRROR Ø 3 CM, CONVEX, 23 G

Before fitting

- A bar with an open end, 16 to 22 mm inside diameter. Closed grips and solid bar ends will not take it.
- Remove the bar end plug; on a drop bar the mirror takes its place under the tape. In France the left side is the most useful.

Fitting, step by step

1. **Slightly loosen the expander screw** with the supplied key, just enough for it to enter the bar.
2. **Push the end piece** into the bar end up to the collar, mirror facing down and back.
3. **Tighten the screw** gradually until the end piece no longer turns by hand. On a carbon bar, without excess.
4. **Adjust from the saddle:** hands on the bar, angle the mirror to see the road behind you and a bit of shoulder as a reference.
5. **Check** after a few minutes on the road: the mirror must hold its angle over bumps.

FOLDED AWAY

Bike parked or stored, fold the mirror under its cap: safe from scratches and knocks. Unfold it before leaving, without forcing the hinge.

DON'T

- Never ride with a loose end piece: it comes out of the bar on the move. A convex mirror shortens distances: a car is closer than it looks. The mirror helps, it does not replace a glance over the shoulder.

Specifications

Contents	**Set of 2, fitting key**	Compatibility	**Bars, inside Ø 16 to 22 mm**
Mirror	**Convex, Ø 3 cm, acrylic lens**	Body	**Reinforced nylon, black**
Size	**5 × 4 cm**	Weight	**approx. 23 g**

IF SOMETHING GOES WRONG

- **The end piece turns or comes out**: expander too loose, greasy bar or out of range; clean, retighten.
- **The end piece will not go in**: screw too tight or bar under 16 mm; loosen.
- **The mirror will not hold its angle**: tighten the joint, without excess.
