FITTING GUIDE

ALUMINIUM PRESTA VALVE CAPS, SET OF 4

Four aluminium alloy caps that screw by hand onto any Presta valve: they keep dust, mud and water out of the core. 0.7 g each, enough for two bikes.

REF. VELKBOPRESTRED4 · PRESTA VALVES (FV) · ALUMINIUM, 17 MM, 0.7 G

What a cap is for

- It keeps **dust, mud and moisture** off the core: a dirty valve does not close properly and slowly loses pressure.
- It saves losing the Presta valve's **knurled nut** when you open it with a frozen finger.
- In aluminium, it does not split like a plastic cap and does not work loose while riding.

Fitting, in three moves

1. **Close the valve:** after inflating, screw the knurled nut at the Presta valve tip back down until it seats.
2. **Screw the cap on by hand,** clockwise, onto the valve's outer thread. No tool: the aluminium thread needs no torque, and a jammed cap is hard to undo.
3. **To inflate,** unscrew the cap, keep it in a pocket or in your hand, not in the grass, and put it back after closing the nut.

Care

A rinse with water after a muddy ride is enough; aluminium does not rust. If tubeless sealant has dried on the valve thread, clean it before screwing the cap back on: the thread, not the cap, is what jams.

Specifications

Valve	**Presta (FV)**	Material	**Aluminium alloy**
Length	**17 mm**	Outer diameter	**7 mm**
Weight	**0.7 g each**	Fitting	**Hand-tightened**
Contents	**4 caps**		

IF SOMETHING GOES WRONG

- **The cap will not screw on**: the valve has a Schrader thread, the wide car-type valve, or its thread is dirty. This cap only fits a Presta valve.
- **It jams**: it was tightened too hard or onto a dirty thread. Undo it by hand, holding the valve by its body, never with pliers on the valve.
- **The wheel goes down despite the cap**: the cap is not a seal. The tip nut is not closed, or the core is leaking.

DON'T

- Not on a Schrader valve, no tool to tighten, and never inflate without removing the cap first.
